### Walk All Over Us

*New Durra-Core™ Adhesive Makes Weathered Stone™ a Practical Flooring and Countertop Option*

Fairhope, AL—March 29, 2007—Weathered Stone™ is not just for vertical surfaces, the new Durra-Core™ Adhesive hardens and waterproofs Weathered Stone™ from the inside out. Durra-Core™ Adhesive is a two part epoxy designed to saturate the product. While still wet, the Durra-Core™ Adhesive will clean up with water, but will still dry water proof. Durra-Core™ Adhesive has a working time of two-three hours, depending upon climate temperature and humidity.

Weathered Stone™ cost effectively and time efficiently remodels existing solid surfaces. Installers have gone over brick fireplaces and tile floors with Weathered Stone™. Weathered Stone has the ability to accomplish this feat, because it is less than 1/32<sup>nd</sup> of an inch thick.

Weathered Stone is produced on canvas. The texture is primarily plaster, but has 15% additives for strength and durability. The product is then, cut, cracked and colored by hand in the United States. Weathered Stone is manufactured in 22 standard colors, and custom colors are available.
