Replica stone covering

WEATHERED STONE

Weathered Stone is a handmade stone and leather replica covering that is only 1/32nd of an inch thick and can be adhered to practically any solid, interior space. Weathered Stone is produced on a canvas backing; the texture is primarily plaster and has 15 percent additives for strength and durability. The product is then cut, cracked, and colored by hand. The product is manufactured in pre-cut sizes, and can easily be cut down to any size or shape. It becomes pliable during the installation process, and dries after applied to a solid surface. The result is a sheet of stone that can be molded, bent and shaped around any interior surface. Its specially formulated grout is non-caustic, and can be used to easily repair any scratches or nicks in the product.

Acrylic sheets

ACRILEX, INC.

The Neon Lights series from Acrilex's line of Acriglas acrylic sheets is ideal for use in point of purchase displays, store fixtures, lighting and sign or lettering applications. Neon Lights sheets can be used in combination with other acrylic products in applications where required. Offered in bright, day-glow colors, they are designed to "pop" when viewed. Each sheet has a standard matte finish on one side and on the reverse side the same glossy surface as traditional acrylic sheets. Neon Lights sheets are offered at a standard size of 4 by 6 feet, and are available in thickness ranging from 1/8-1/2 inches. Like other acrylic sheets, Acriglas Neon Lights sheets can be drilled, routed, laser-cut, glued, formed, hot stamped and silk-screened. Sheets in the series can be custom cut or configured to meet all specifications.

Hammer drill

METABO CORPORATION

The SBE1010 Plus hammer drill features a 1/2-inch Futuro Top keyless chuck, which makes bit changes quick and easy and ensures secure bit clamping. Under extreme conditions, with Metabo's Vario Tacho Constamatic (VTC) speed stabilization, the hammer drill increases efficiency by working at nearly 100 percent of the no-load speed right up to the full rated amp load (8 amps). In addition, Metabo's "Service Minder" light signals the operator when it is time to change-out the tool's carbon brushes. Useful for drilling holes in steel, wood, concrete block, brick and solid concrete, the SBE1010 Plus has a capacity of 3/4 inch in concrete, 5/8 inch in mild steel and 1 1/2-inches in softwood. The hammer drill's side handle can be rotated 360 degrees and is ergonomically designed to counteract the torque of the tool when drilling into hard materials.
